*Ref.: Water free urinals on trial*

The Mackenzie Presbyterian University is engaged in a water saving plan comprising different stages and priorities.

In February 2004 we installed for test purposes, two water free urinals supplied by **Falcon Waterfree Brasil Ltda.** in replacement of the conventional water flushed urinals.

After more than two years in use, we are able to certify that the units function under our entire satisfaction, with absence of odors, saving water and requiring extremely simple and fast daily hygienic cleaning procedures.

Since its installation in a high traffic restroom at Itambé Campus / São Paulo, chronic maintenance problems of the former conventional urinals such as odors and clogging were eliminated.

Due to the absence of flush valves also additional maintenance costs such as spare parts and labor were eliminated.

The maintenance was only restricted to a periodic replacement of the cartridges.
